Anjaiah Munigala

£

Summary

Engineering Manager with overall **15+ years of experience** in **system engineering, embedded software development**, and **technical leadership** within **safety-critical domains** delivering large-scale, safety-critical systems across automotive. Proven expertise in end-to-end systems engineering lifecycle, cross-functional leadership, and program execution for globally distributed teams. Strong background in requirements engineering, system architecture, MBSE (SysML), and Agile program governance, with a track record of delivering complex, multi-supplier systems aligned to business and customer outcomes. Experience in mission-critical system reliability, risk management, and compliance-driven development. Completed **Leadership with AI program at the Indian School of Business (ISB)**, focusing on **AI-driven engineering leadership**. I have exposure to work in international locations and assignments in India, Germany, Sweden, and China. Passionate Artificial intelligent and Machine learning learner, looking for new challenges to work in a dynamic and innovative work environment.

Experience

05/2024 –

Present

Tata Technologies Ltd, India

Principal ePT system Engineer/ Project manager

- Leading end to end program execution for battery pack and multipack controller programs ensuring on-time, high- quality deliverables.
- Managing cross functional teams across software, firmware hardware and industrialization.
- Driving project planning, scheduling, resource management, aligned with customer and business goals.
- Establishing program governance, risk registers, and executive reporting dashboards.
- WGM, CSC and BMS Requirements analysis update architectural flow.
- Acting as customer interface and Software Architect for Multipack controller (MPC) projects ensuring alignment and delivery transparency.

11/2023 –

03/2024

Luxoft GmbH, Germany

Senior solution Architect - eMobility

- Led **RFQs analysis, project estimation**, and delivery planning for large EV and e mobility engagements.
- Defined delivery strategies, resource plan and governance models for global teams.
- Reported Project risks, executive level reports on cost, resource utilization metrics and project delivery risks.

11/2022 –

10/2023

ZF Automotive Systems, Germany

System Engineer - Commercial Vehicle Steering Systems

- Served as single point of contact for customers across multiple steering system programs.
- Managed requirements, delivery tracking and milestone reporting across parallel work streams.
- Provided structured status updates and risk assessments and mitigation plans to stakeholders.

4/2022 –

10/2022

Tata Technologies Nordic, Sweden

Senior System Engineer/Program Lead - Vinfast BEV vehicle, Electric Power train domain

- Managed the **program delivery** and **change management** with customer for ePowertrain systems.
- Coordinated cross functional teams including Vehicle control unit, BMS, 3 in 1, High voltage Safety and supplier teams to ensure synchronized delivery.
- led releases tracked dependencies and reported progress using agile ceremonies and metrics.
- Supported in creating BMS system architecture and flow diagrams.

10/2021 –

03/2022

Afry, AF-Industry AB, Sweden

Technical Specialist - Scania

- Customer interaction and requirements gathering.
- Responsible for pre-study and implementation of the functions.
- Definition of system architecture and trade off and define the delivery timelines.
- Requirement finalization and System Architecture design and development of the function.

10/2015 –

09/2021

Robert Bosch India pvt Ltd, India

System Engineer - Boost Recuperation Machine (BRM)

- Perform release activities and provide release documentation for the customers.
- Single point of contact for Customer interface for project deliverables related to BMW projects.
- Responsible for capturing of the stakeholder requirements from internal and external customers for new products or problem spaces.
- Definition of system architecture and management of system/subsystem requirements specifications.
- Support preparation of FMEA, DFMEA, preparing fault tree analysis for problem analysis
- Responsible for System and Software requirements for Sensorless position controlling (R&D project) for DC motors for various applications like Windows, seat system and steering column adjuster

Personal Info

Address:

#302, Infocity Excellence,
Nallagandla, Hyderabad
500046, Telangana, India

CORE SKILLS

- Systems Engineering Lifecycle (V-Model, ASPICE, MBSE)
- Requirements Management (DOORS, Polarion)
- System Architecture & Integration
- Program & Delivery Management (Agile, SAFe)
- Stakeholder & Customer Management
- Risk, Safety & Compliance (ISO 26262, FMEA, FTA)
- Cross-functional & Global Team Leadership
- Supplier & Subcontractor Management
- Data-driven Decision Making (KPIs, Dashboards)
- AI-driven Engineering & Digital Transformation

Classification: Public

- led Agile teams as **scrum master**, managing sprint execution, releases and retrospectives.
- Supported and resolved the cross functional issues from the field.
- Individually delivered Automotive steering column adjuster Demo using sensorless position control integration on TLE 986x controller.

Robert Bosch GmbH, Germany (10/2017 – 04/2019)

Technical Lead - Sensorless Position Algorithm Development

- Responsibilities including project management, resource allocation, planning and performance validation including 1-1 meetings.
- ScrumMaster for a team of five and plan the tasks and monitor release activities.
- Responsible for deriving and extracting system level requirements for DC motor and creating the system design documents using rhapsody.
- Responsible for data collection using rapid prototyping (Dspace) on various systems (window lifter and automotive steering column adjuster) with different motors (2 pole and Folgepole DC motors).

Delphi Automotive systems Pvt Ltd, India

Advanced Software Engineer - Body Control Modules

- Designing and developing Models for Tire Pressure Monitoring System, Anti-theft Alarm system, CDL and light controlling modules using MATLAB, Simulink, State flow and Embedded C programming.
- Instrumental in Requirements gathering and analysis.
- Auto code generation using code generators RTW Ecoder and Target Link.
- Recognized as the Technical expert in TPMS, and Exterior Light control modules.
- Technical Lead for the Algorithm Development for G sensor Angle calculations and Anti tow module.
- Involved in integration of hand C coded features and model-based auto-coded features.
- Bench testing of the BCM ECU with Switch box, Load box, actual motors/relays/simulators and simulation of other ECUs through CANoe and minicube debugger.
- Performed Vehicle level testing during my travel to China for support of development activities.
- Good understanding of the ECU runtime measurement concepts.

Technical Innovations and Solutions (TINS)

Software engineer

- Project involves designing and developing the Tire pressure monitoring device and application development using Embedded C, MATLAB, Simulink, state flow and RTW Ecoder.
- Test cases preparation and Model in Loop (MIL) testing.
- Auto Code Generation using RTW Ecoder and integrating to the project environment.
- Model coverage document reporting.
- Instrumental in Module Testing, Integration testing on Manual Test Console.

Education

Leadership with AI certification from ISB - 2025

Indian school of Business management online Course

Masters in Control and Electronics – 02/2009 – 05/2010

University Of Teesside, Middlesbrough, United Kingdom.

B-Tech in Electrical and Electronics Engineering – 08/2004 – 05/2008

Vivekananda Institute of Technology and sciences (JNTU), Hyderabad, India

Certifications

Leadership with AI certification with ISB, includes Machine learning and Artificial Intelligence.

L1 certified Functional safety Engineer (ISO 26262)

Certified SysML system Modeler

Udemy certification Engineering manager

LinkedIn certification project manager foundation

LinkedIn Certification fundamentals of Agile project management

O'Reilly Certification in Product Manager and System Engineering

Tools

Agile & Collaboration: Jira, Pulse, Confluence, Azure DevOps

Data & Reporting: Power BI and Excel dashboards

Program & Engineering Tools:

Matlab, Simulink, State flow, RTW

Ecoder, Target link, Enterprise

architect, CM Synergy, DOORS,

Rhapsody, PTI integrity, Polarian, ALM,

PLM, Tensor flow, Renesas Emulator,

CAN, CANalyzer, CANoe., Autosar

Builder, Source Insight, Eclipse, Code

wright, INCA, FAMOS, MDA. Tasking,

Visio, Dev Azure

Analytics & AI:

Python(Basic), AI-driven leadership framework.
