PROFILE

Passionate and results-oriented Engineering Leader with a distinguished track record of spearheading diverse global teams to ignite innovation and bring forth groundbreaking solutions for commercial HVAC. Renowned for exceptional leadership and project management prowess, adeptly guiding cross-functional teams focused on embedded platforms and chiller software controls within dynamic and competitive landscapes.

Demonstrates a rich history of effective product development, shaping software architecture, orchestrating systems engineering, and harnessing analytics in embedded control software for commercial HVAC applications.

Bringing over 20+ years of comprehensive experience in navigating the complete embedded software development lifecycle, I am primed to lead teams towards unparalleled success and innovation.

CORE
QUALIFICATIONS

Proven experience in leadership roles overseeing multi-domain global engineering teams in a scaled agile environment.

Background in product & platform development for global commercial HVAC.

Experience managing global engineering teams and understanding regional nuances.

Strong technical background with experience in multiple engineering domains such as industrial, renewable energy-solar, Rail, Data centers and commercial HVAC.

Demonstrated leadership skills with the ability to inspire and lead teams toward common goals. Effective decision-making and problem-solving capabilities.

Holding a couple of US Patents with Carrier corporation.

Intermediate level of competency in AI, machine learning & data science.

High degree of confidence and ability to influence others through strong communication and negotiation skills. Strategic mindset with the ability to align engineering efforts with broader business objectives.

EXPERIENCE

{RESPONSIBILITIES:
KEY SKILLS}

SENIOR TECHNOLOGY MANAGER

CARRIER CORPORATION - CARR(NYSE) | 2019 -PRESENT

Engineering Manager:

People management | Team management | Process owner | Ethical evangelist | Program Management | Agile Project management | Stakeholder management | Product management

- Building, nurturing & leading a team of 37 embedded/software engineers, focused on product innovation, customer centric & scalable design, development, quality, manufacturability, serviceability, testability of next-gen HVAC chiller products.
- Spearheading a team dedicated to the holistic development of full-stack embedded platforms, ranging from hardware and BSP to LINUX OS, DevOps, product security, IoT, Edge Analytics, middleware, and diverse commercial HVAC product applications.
- Seeks out and leverages latest technology innovations, cross collaborations, pursues prototyping, deployment of new process models & methods to make products & process better.
- Functioning as global program manager for Commercial HVAC Air-cooled new & sustaining products for commercial and data center applications.
- Owning complete product life cycle which includes requirement definition, feature prioritization, organic and acquisitive decisions making, design reviews, modeling, implementation, testing, continuous integration & delivery of HVAC products.

- Maintaining alignment with program managers and product owners of other functions (e.g. factory, aftermarket, marketing, equipment etc.).

Technical management:

Mentorship | Innovation evangelist | Domain focal | Software Architecture | Embedded system | HVAC control system | Model Based Design |IoT | Data Science

- Coordinating domain and functional team building exercises to improve collaboration.
- Working with suppliers for technical solutions.
- Hands-on with design (software architecture), modelling (UML, MiL), development (C, C++, Python, RTOS, Linux, protocols, hardware debugging, cyber security, IoT & connectivity integration etc.)
- Leading team/organizational initiatives like 1) Digital twin of chiller for better prognostics 2) test platform virtualization with test vectors – plant – controller – monitors. 3) End to end qualification of complicated field scenarios before deployment 4) WASM based WebUI for Chiller controllers 5) Edge analytics 6) embedded UI technologies 7) Emulation of processors for CI/CD using IMPERAS & QEMU.
- Closely working as a domain expert with i3 labs – an incubation ecosystem within Carrier.

ACHIEVEMENTS HIGHLIGHTS: The existing role is impactful as this team has improved, delivered, and sustained the #1 ranking of Air-cooled products. Delivered platform for data center offerings globally,

TECHNICAL SPECIALIST/LEAD

CARRIER CORPORATION - CARR(NYSE) | 2013 - 2018

Led next-gen Carrier commercial projects with an Agile-driven approach, managing a team of enthusiastic software engineers. As a Scrum Master, coordinated efforts across teams and stakeholders, maintaining a focused backlog. Spearheaded firmware development, MBSE, explored data analytics and AR/VR/MR solutions for industrial applications.

SENIOR PROJECT ENGINEER

LARSEN & TOUBRO - LARTOU(NSE) | 2010 – 2013

spearheaded the design and development of a grid-tied solar inverter control system. Utilizing a Model-Based approach, I meticulously crafted and verified the system, leveraging MiL in Matlab/Simulink for design and simulation, and executing code generation and SiL verification.

SOFTWARE DEVELOPMENT ENGINEER II

COGNIZANT – INVENSYS COE (NOW SCHNEIDER ELECTRIC) | 2009 – 2010

In the Invensys SCADA division, blazed trails as a firmware development expert for RTUs (remote terminal units) and a design practitioner. Led the charge in crafting product modules, designing interfaces and software modules, and executing electronics system deployments with fiery passion.

SOFTWARE ENGINEER – EMBEDDED SOFTWARE

CYIENT – PHILLIPS & HITECH COE | 2007 – 2009

Led firmware and driver development, integration testing, and production quality for Philips globally. Managed on-site coordination, requirement identification, and development activities for Schlumberger in the USA. Utilized mathematical modeling to enhance oil tank level sensor performance.

HARDWARE DESIGN ENGINEER

RT VISION TECHNOLOGIES P. LTD. | 2005 - 2007

Design of LED Light Signaling Unit (CENELEC: SIL-4 compliant) over complete development lifecycle, for Indian Railways.

EDUCATION

 **International Institute of Information Technology**
PGSSP, Data science, Statistical methods, Data warehousing & Data mining
2017 – 2019

 **Annamalai University**
Master of Business Administration (MBA), Project Management
2007 – 2009

 **Dr. A.P.J. Abdul Kalam Technical University (AKTU)(formerly UPTU)**
B.Tech, Electronics & Communication
2000 – 2004

PATENTS

Method and apparatus for thermally preconditioning a meeting space

US • [US11287151B2](#) • **Ankit Sarin** • Carrier Corporation

Priority 2019-02-15 • Filed 2020-02-12 • Granted 2022-03-29 • Published 2022-03-29

An example method for thermally preconditioning a meeting space includes determining that a meeting is electronically scheduled for a meeting space for a plurality of attendees. A thermal preconditioning setpoint for the meeting space is determined based on individual thermal preferences of the ...

System and method for configuring communication interval for sensing device/s

US • [US11570792B2](#) • **Ankit Sarin** • Carrier Corporation

Priority 2019-07-31 • Filed 2020-07-29 • Granted 2023-01-31 • Published 2023-01-31

Aspects of the invention are directed towards a system and a method for configuring a communication interval of one or more sensing devices. One or more embodiments of the invention describe a method comprising steps of receiving a signal strength value from one or more sensing devices and ...

Dual filtration and auto cleansing mechanism

US • [US20230311050A1](#) • **Ankit Sarin** • Carrier Corporation

Priority 2022-03-29 • Filed 2023-03-28 • Published 2023-10-05

A cleanable filtration system for an air conditioning system includes a continuous filter positionable adjacent to an inlet opening in the air conditioning system and a drive system operably coupled to the continuous filter to move the continuous filter relative to the inlet opening. A cleaning ...

Airborne contaminant detection and localization in ducting systems

EP US • [EP4215914A1](#) • **Ankit Sarin** • Carrier Corporation

Priority 2022-01-24 • Filed 2023-01-24 • Published 2023-07-26

Airborne contaminant detection and localization systems (200) include an HVAC system (102) having a duct (202), a first vent (204a) connected to a first indoor space (208a), and a second vent (204b) fluidly connected to a second indoor space (208b), with the second vent (208b) being downstream ...
