CAREER OBJECTIVE

Enthusiastic and detail-oriented Electronics & Communication Engineering graduate with solid experience in embedded systems, IoT development, and firmware programming. Eager to contribute to embedded software development and grow with a passionate team.

EDUCATION

- Bachelor of Technology in Electronics and Communication Engineering
Narasimha Reddy Engineering collage (2023)
CGPA: 6.84/10
- Diploma in Electronics and Communications Engineering
Siddhartha Institution of Technology & science, Narapally (2020)
CGPA: 71.45/10
- S.S.C Bhashyam High School, Habsiguda (2017)

SKILLS

- Programming Languages : C, Embedded-C & Data Structures
- Operating Systems : Windows, Linux (Ubuntu)
- Controllers : 8051MC, Arduino UNO, ESP32 and STM32
- Communication Protocols : Wi-Fi, USB, UART, I2C, SPI
- Wireless Modules : GSM, GPS, GPRS, RFID & BLUETOOTH
- Debugging Tools/Platforms : Arduino IDE, Keil IDE, Proteus, MP Lab, STM32CubeIDE.

INTERNSHIP & TRAINING

- Completed 6-month Embedded Systems Training at **Ignite Embedded System Institute**, Ameerpet.
- Internship at **Ignite Embedded System** – Hands-on experience with embedded C and circuit design.

PROJECTS

- **Bluetooth Controlled Home Automation System Using 8051 Microcontroller**
Role: Embedded Circuit Designer
 - Conceptualized and built a Bluetooth-enabled home automation system controllable via a mobile app, earning recognition as the most junior member on the team for innovative design.
 - Utilized 8051 microcontroller and HC-05 Bluetooth module.
 - Programmed using Embedded C in Keil uVision.
 - Designed opto-isolated relay circuits for AC device switching.
 - Interfaced with Android app for serial command input.
- **Wireless Home Automation System using ESP8266 and Mobile App**
Role: IoT Developer / Embedded System Designer
 - Designed and developed a smart home automation system using ESP8266 (NodeMCU).
 - Controlled lights, fans, and sockets via Blynk mobile app over Wi-Fi.
 - Used relay modules for safe AC switching.
 - Enabled real-time device status updates.
 - Aimed to improve energy efficiency and convenience in smart homes.
 - TRAFFIC LIGHT CONTROLLING SYSTEM USING 8051 AND IR SENSORS & LDR SENSORS.

ACADEMIC PROJECTS

- 8X8 DOT MATRIX DISPLAY
- IOT BASED AIR AND WETHER MONITORING SYSTEM USING Arduino UNO
- Used STM32CubeIDE for peripheral initialization and firmware development in Embedded C.
- Enabled UART communication for serial monitoring and debugging in real-time.

STRENGTHS

- Strong problem-solving and debugging skills
- Passionate about embedded systems and automation
- Quick learner with hands-on project experience
- Team player with excellent communication

DECLARATION

I hereby declare that the information provided is true to the best of my knowledge.
