Bid Technical Manager, Alstom, 04/2021 – Current

TENDERS: NSRP, Cairo Line 1, Milano, BMRCL-Phase2, KV MRT, Sydney, Haifa Nazareth, Naples Metro, Melbourne SRL, Mumbai L4/L5/L6, Sydney Metro, Etihad Rail etc

- Manage the entire Bid Technical process from pre-bid to post-bid stages.
- Manage cross-functional engineering team to finalize the functions/products and SoW for tender.
- Analyse RFPs with respect to reference solution and develop Engineering strategy/proposal.
- Manage QCD commitments with clear reasons/analysis based on ReX/data analysis.
- Identify all risks and GAPs and develop a strategy to address them during project stage.
- Interface with product managers/directors to manage the development needs for the tender.
- Lead discussions with external contractors/customers to clarify queries/address tender needs.
- Ensure transition to Project Manager/Engineering Manager in case the tender is won.
- Lead technical discussions/workshops with customer and represent/protect company product/solution.
- Coordinate with PM/other sub-systems and internal teams, in terms of delivery plans, technical issues, projects risks, project progress etc
- Lead interface meetings with other contractors to manage smooth operations.
- Discuss with product team for development related to GAPs in the project.
- Strategize regarding delivery of baselines, solutions provided and formulate the value proposed to the customers.
- Scheduling project activities to meet milestones on time/Update management in case of potential delays.
- Monitor KPIs of the project and asses major issues/conduct RCAs to enable better performance.
- Plan Resource Requirement & Manage Team member to ensure project completion within budgeted hours.

- Propose innovations & solutions to be cost competitive for tenders.
- Prepare dashboards and comparison charts on cost & risk on various technical solutions.

ATC Project Leader, Alstom, 03/2019 – 03/2021

PROJECTS: Taichung Green Line, Taiwan; Wanda Line, Taiwan; Thomson East Coast Line (TEL), Singapore

- Tender activities: Forecast of project budget (man-hours) and BOM based on RFP, technically analysing the tender RFPs to check for compliancy/adherence to various clauses. Creation of risk mitigation matrix for potential risks that could arise.
- Apply the SDLC models of waterfall in formal process and agile/iterative model as and when necessary. Part of the V cycle process with different roles at different stages.
- Adhering to change management process, requirement management process, configuration process for all baseline releases.
- Process improvement: Monitor KPIs for various project activities and suggest process improvements/changes in ways of working/creating of checklists leading to improvements in quality and reduction in re-works. Achieved 25% reduction of manhours through above methods
- Training team members on technical details/managing a project/to suggest solutions.

ATC Interface Lead/T&C Lead, Alstom, 03/2018 – 02/2019

PROJECTS: THOMSON EAST COAST LINE (TEL), SINGAPORE

- Review Test scenarios for T&C, and other design/dynamic testing related documents.
- Converting contract clauses into test scenarios for validating the software/interface functions.
- Lead technical discussions with customers for testing issues. Further, played the role of interface between design and customers for improvements in functionalities and closure of issues.
- Lead workshops with customers for design related issues and proposed solutions.

ATC Design/Application Engineer, Alstom, 07/2013 – 02/2018

PROJECTS: LUCKNOW METRO, INDIA; GUADALAJARA METRO, MEXICO

- Preparation of Requirement specifications and Architecture Descriptions for customer/other design documents for products/software's based on contractual clauses.
- Requirement Traceability using DOORs/Change management for issues/new developments
- Troubleshoot issues arising in verification/T&C, and update requirements/software logic.
