

OBJECTIVE

To achieve an esteemed position in the field of software development, which utilizes and explores my talents to the greatest extent and enhances my creativity and ability with the scope for recognition and advancement, to bring good name and fame to employer and me.

SUMMARY

- **18+ Years of experience in Semiconductor/Embedded domain as Senior Engineering Manager.**
- **7+ Years of experience in Building, Leading teams, Multi site stakeholder management in multiple positions.**
- **3 +Years of onsite working experience in Samsung Electronics Corporation, South Korea.**
- **2+ Years of onsite working experience in China with ZTE, Vivo & 1+ Mobiles divisions.**
- **Expertise in designing & implementing different Sensors (ex: Biometrics/ZF/Z-wave) for Edge devices.**
- **Experience in Android, Tizen OS Framework and Linux Kernel and Device Driver Development.**
- **Expertise in acquiring Certification, Field Trials for features/protocols from Service Vendors in Europe, US, Korea.**
- **Expertise in International Technical discussions and was part of Samsung technical team which involves in international feature standardization for Asia/Pacific region.**

PROFESSIONAL EXPERIENCE

NAME OF THE COMPANY	DESIGNATION	PERIOD
Micron Technology Operations	Senior Engineering Manager	November 2022 -- Present
OPlus India (Oneplus & OPPO)	Senior Principal Engineer/EM	June 2019 – November 2022
Qolsys Software India Pvt Ltd (Johnson Controls)	Technical manager	Sept 2018 – June 2019
Synaptics India Pvt Ltd	Senior Software Engineer	Jul 2016 – Sept 2018
Samsung R&D Institute Delhi	Lead Software Engineer	Jul 2008 – Jul 2016

TECHNICAL SKILLS

Operating System	: Linux, MS Windows
Hardware	: ARM and MIPS Architecture
Languages	: C, C++ & Java
Tools	: Kdb (Kernel Debugging), gdb. Klockworks, Git, JTAG, Trace32,
Environment	: Visual Studio 2013, VMWare
Repository Tools	: Perforce, Jira, ALM

AWARDS AND CERTIFICATIONS

- Successfully rolled out “IBIS System” (Automated build system) into SRID in coordination with Samsung Electronics South Korea
- Successfully completed the Commercialization of the 3G USB Dongle support on DTV which involved me from the inception of the feature to the marketing/technical discussions and launch of the feature on the DTV.
- Best Project award of the Year 2015 for executing a project without a bug and best process compliance.
- Awarded best new joiner in 1+ and 4+ times Employee of the month award.
- Awarded best project of the Year 2021 for successful execution of OOS to COS transition project in Oplus.
- Awarded best project and best execution award for driving Micron Solution's LPDDR5X 1-gamma Power & Performance benefits for Mobile & Client.
- Awarded 18+ Spot/Bravo awards from year 2023 to present.

MAJOR PROJECTS AND INVOLVEMENTS

Client: Micron Operations India LLP, Hyd

Title: System & Product level power & performance analysis for Memory (LPDDR/DDR/LPCAMM2) & Storage (eMMC/UFS/cSSD)

Start – End Date: Nov 2022– present.

Environment: Linux, C++, Python

- As lead of the team for Stakeholder Management, Hardware Procurement, Budgeting, Vendor Management, Hiring, training, & performance evaluation of the members.
- Power & Performance Modeling of Pre-Silicon for LPDDR & UFS.
- Exploration of new workloads including AI (defining/deployment/data analysis).
- Characterizing the workloads (DoU/HBW/AI).
- Integration of new architectural design changes to the model (Gem5). System analysis of the products to understand the behavior of products in different benchmarks & use-case scenarios.

Development of power & performance model for DRAM & UFS, development involves complete end to end development of the model after discussions with multiple stakeholders over multisite environment which involves collating different kinds of data/ information (Hardware/ Design) specifications. Using the same in adapting to the model in accordance with the product & JEDEC standards.

Client: Oplus India R&D Centre (Oppo & Oneplus), Hyd

Title: BSP bring-up for Oppo Mobile

Start – End Date: Jun 2019– Nov 2022

Environment: Linux, C++, Android OS

- End to end ownership of team's deliverables for the projects, performance evaluations, staffing and inter center communications with different Teams which are globally placed.
- Involved in bring up of Oppo/Oneplus models based on Qcom and Mediatek Chipsets
- Integration of the sensor support to the Android Mobiles
- Early adaptation of Android- Versions frameworks to our product requirement.
- Security & Trust-zone Solutions in Mobile.

Development of peripherals involves complete end to end implementation of the product from Design, Hardware Specifications, and vendor discussions to board bring-up, new software feature development for our Mobile.

Client: Qolsys Software India Pvt Ltd
Title: IQ Panel & Remote Generation3
Start – End Date: Sept 2018– June 2019
Environment: Linux, C++, Android OS

- My role as a technical manager is to work with a team of 14 for successful execution of the SDLC.
- Have mentored resources for the team needs and trained them for long term vision.
- Involved in bring up of the IQ Panel & Remote on the Android Stack
- New Feature development for Power G, Zwave & IR Sensors
- Integration of the sensor support to the Android Mobiles & Home Automation Solution
- Early adaptation of Android- 'X' frameworks to our product requirement.

Development of the IQ Panel & Remote involves complete end to end development of the product from Design, Hardware Specifications and vendor discussions to board bring-up, new software feature development for our Home Automation Solution which involves Zwave, PowerG, IR and all the wireless connectivity modules as well as the traditional sensors for home security

Client: Synaptics India Private Limited, India
Title: Biometric Fingerprint Sensor support for Android Mobile
Start – End Date: July 2016– Sept 2018
Environment: Linux, C++, Android OS

- As a Senior engineer have worked in Customer Engineering team front ending the customers like Huawei, Vivo, ZTE & Sony for integration of Biometric solutions.
- Involved in bring up of the Biometric Fingerprint Sensor on the Android Mobile for both Trust Zone (TZ) and non-TZ environment.
- New Feature development for fingerprint sensor
- Early adaptation of New Android Versions & frameworks to the OEM's requirements.

Client: Samsung India R&D Institute, India
Title: Commercialization of Retail & Hospitality TV
Start – End Date: July 2008– July 2016
Environment: Linux, C++, Android OS

- Have lead teams in multiple positions for commercialization of Retail and Hospitality TV for Samsung.
- Involved in bring-up of the Tuner, Display, Video Processing (Pre & Post) at kernel level on RTOS/Tizen OS and new feature implementation of the TV.
- One of the Core members in implementation of 3D feature in Samsung TV.
- Customization and Protocol implementation of Hospitality solutions for Europe & Korea Regions.
- Created serial applications solutions for easy debugging of TV

ACADEMIC CHRONICLE

LEVEL	INSTITUTION
MTech (2008) Power Control and Power Systems.	IIT Madras
BTech (2006) Compute Science	Quba College of Engineering and Technology (aff JNTU Hyderabad)
